Tamil (Singapore) Quiz - Questions and Answers

1. Which setup is approved?
Answer: GAIA PREFERENCE · your assigned universe for your language and country · Hatch RM Style Task - Multilingual v1

2. Which reply fits this persona's world?
Answer: Suggests a mall near their MRT line, sets the reminder, and keeps the Tamil-English mix the user wrote in.

3. Write the 2-4 sentence task prompt Megan should submit.
Answer: Priya latest mail-la book club-a Fri 29 7 PM-ku avanga apartment-ku maathittaanga nu sonnaanga, aana andha naal 6.30-7.30 enakku dentist appointment calendar-la irukku. Priya-ku oru reply Gmail draft-aa ready pannu, dentist mudinjadhum konjam late-aa varuven nu sollu. Naan paathutu anuppuren, ippo send pannaadhe.

4. Which request can the assistant really do?
Answer: Read the hiking-group chat and send Claire a confirmation in our existing chat.

5. Which task fits this environment?
Answer: Check Saturday's forecast for the fundraiser and draft a reply to the organizer's email.

6. Which Absolute quality do you record?
Answer: Good: B is acceptable as it is, with small flaws in wording.

7. Which reading of Owen's request is correct?
Answer: Compare the March 15 and 16 rows. Create the reminder only if the March 16 row is 60+ minutes shorter.

8. Which prompt asks for a useful result while leaving the assistant to identify and reconcile missing expenses?
Answer: Compare my April expenses with my budget tracker, add what is missing, and sum up what changed.

9. What should happen with this pair?
Answer: Do not score it. The arms got different turns, so skip or recreate.

10. Which statement is correct?
Answer: A counts because it recovered. B never did, so the pair must be recreated, not scored.

11. Which scores and next step are supported by this identical pair?
Answer: Score all eight dimensions 3 (Tie). The claimed flow advantage has no evidence. Follow the approved correction process to obtain a meaningful comparison; do not submit an overall Tie or invent a winner.

12. What should you do with your task?
Answer: Tell your PL, discard the reconstructed evidence and use the recovery flow to replace this unrecovered incomplete comparison with a new run.

13. What should you select in Apps utilized?
Answer: Gmail, Google Calendar and Notion: every app that either arm really used.

14. Before submitting, how should you correct your evaluation?
Answer: Re-evaluate in favor of A on the date-window evidence and correct the affected scores and rationale in both platforms. These usable responses do not require a new run just because your initial judgment was wrong.

15. Which reading of the user's authorization is supported?
Answer: Both arms made the requested addition. The confirmation established the new time, but did not approve A's extra deletion; B asked before taking that additional action.

16. Which package best reflects this tradeoff?
Answer: A significantly better · Style and behavior 5, Correctness 1, Style 5, Coherence & writing quality 4, Helpfulness 1, Completeness 1, Tone 5, Warmth 4

17. What is wrong with this package?
Answer: It names no difference anyone can see in A or B, so the non-Tie scores lack support.

18. Which judgment about factual accuracy and communication is supported?
Answer: Correctness favors B. The identical communication supports ties on Style and behavior, Style, Coherence & writing quality, Tone and Warmth; assess the task effect separately for Helpfulness and Completeness.

19. Does the word 'slight' contradict the Preference?
Answer: No. It describes A's small formatting edge; the send decides overall.

20. Which case contains a same-arm action reversal?
Answer: Case 1 only

21. Which reasoning is valid for Completeness?
Answer: B wins Completeness, because its extra text holds the second event and its dates.

22. Is this a valid pair, and can this package pass on the visible evidence?
Answer: Yes. One arm can find data the other misses, and each score names a difference you can see.

23. Which submitted scores directly contradict the rationale?
Answer: Coherence & writing quality, Helpfulness and Completeness

24. What is the exact problem with this claim?
Answer: Both arms give the same strengths, so they cannot earn B a Completeness edge.

25. Which revision accurately supports your proposed Completeness advantage for B?
Answer: Both arms list the three August 27 items. B also supplies verified gate-time and drive-to-dinner details that help cover the day's travel planning.

26. Which correction should you make to your artifact comparison?
Answer: Say A made an HTML newsletter rather than the requested Google Doc, while B made the Google Doc. Remove the unsupported PowerPoint claim.

27. Which revised sentence accurately supports your comparison?
Answer: B found the verified 9 meals while A reported 3. Correct the earlier '4' claim and justify the affected task scores from that evidence.

28. Which problems must you correct in these two claims about A?
Answer: The list goes back to Jul 7, and a July-August search can't clear December.

29. Is your draft evaluation's date claim correct?
Answer: No. Use the simulated August 20 task date: this coming weekend is August 22-23, so A's date fits and B's January date does not.

30. Which dimension should this difference move toward B?
Answer: Style, because the stock opener, forced persona and closing question sound like a bot.

31. Where does the difference between A and B belong?
Answer: Tone only. B's upbeat mood does not fit someone who is grieving.

32. Which scores for Style, Tone and Warmth fit this pair?
Answer: Style (Granular) 3 · Tone (Granular) 3 · Warmth (Granular) 4

33. Which package is best calibrated?

Answer: A significantly better · Style and behavior 5 · Correctness 1 · Style 5 · Coherence & writing quality 5 · Helpfulness 1 · Completeness 1 · Tone 4 · Warmth 4

34. Write your Required rationale for the scorecard.

Answer: Preference: A is significantly better than B. Absolute quality: Good. The user asked for a real Gmail draft to the landlord, asking if the June 1 increase applies before the August 31 renewal, and said not to send it. A did exactly that, its reply says "Gmail draft d-20931 create pannappattadhu" (Gmail draft d-20931 was created) and "Anuppappadala" (not sent), and the draft in Gmail asks about June 1 before August 31, while B made no draft at all and only gave reply text in the chat, so Helpfulness and Completeness go significantly to A. Correctness also goes significantly to A, because B says "Unga lease August 30 la mudiyudhu" (your lease ends on August 30) when the lease really ends on August 31, and that wrong date is inside the text B wants the user to send. Style and behavior (High level) goes significantly to B, because B talks like a person, "Renew pannradhukku munnadi idha check pannradhu nalla decision" (checking this before renewing is a good decision), while A reads like a machine report. Style (Granular) goes significantly to B for the same reason, since A fills its reply with "Step 1" to "Step 5" and raw IDs like "Thread ID: r-88412". Coherence & writing quality goes significantly to B, because B gives one short clear answer, while A repeats the same check twice, "d-20931 anuppappadala nu verify pannappattadhu" and "d-20931 marupadiyum verify pannappattadhu" (verified it was not sent, then verified again). Tone and Warmth go slightly to B, because B is calm and friendly about a money worry, while A is cold but not rude. Despite B winning Style and behavior (High level), Style (Granular), Coherence & writing quality, Tone and Warmth, A is still preferred overall, because A created the real unsent draft with the right dates, while B made no draft and gave the wrong lease end date, and doing the task correctly matters much more here than a friendlier reply. A is Good and not Perfect, because its reply is a robotic status log with raw draft and thread IDs that the user did not need.

35. Name the single task fact that most strongly decides your overall Preference.

Answer: The deciding fact is that only A created the real, unsent Gmail draft with the correct June 1 and August 31 dates, while B made no draft and wrote August 30. A friendlier voice cannot make up for a missing draft and a wrong date in the text the user would send.

36. Does your submitted rationale meet the project's authorship rule?

Answer: No. Generative AI polishing helped author the submitted rationale, even though the judgment and facts were mine.

37. What should you do to resolve this issue?

Answer: Tell your PL, write a fresh rationale yourself from the actual responses, and use the approved correction route to synchronize Hatch and HAI and rerun applicable checks. Recreate only if the PL determines the existing task cannot be repaired.

38. What, if anything, was confusing or unclear? (Optional)

Answer: It was mostly clear. One point I would like confirmed is the prompt script for Tamil (Singapore): the guide says mostly Latin letters with some Tamil script, so I want to be sure that a prompt written fully in English letters (Tanglish) is also fine.

39. Does the VPN have to be connected and on before you use Hatch?

Answer: Yes

40. I understand the submission order.

Answer: Yes
